

Pressed Steel Cover Grilles

Introduction

Mann McGowan Pressed Steel Cover Grilles offer an element of privacy, while maintaining the air movement between compartments. They can be used in isolation, for non-fire rated applications, or in conjunction with the Mann McGowan Pyrogrille 100 intumescent grille, to offer a fire rating up to 120 minutes integrity. The slim line design means they are unobtrusive, with a depth of only 5mm protrusion from the door or wall face. The grilles are supplied with coloured screw heads to match the cover grille finish, offering an aesthetically pleasing and cost effective solution.

Features

- Made from 20swg mild steel, with a horizontal louvre design set at a 30° downward deflection on an 8.5mm pitch
- Standard finishes are PPC RAL9010 white, primer, or satin silver. Mill finish is also available for priming and painting on site. A range of special colour RAL finishes available upon request
- Standard nominal sizes are 100x100mm up to 600x600mm in either configuration, in 50mm increments
- Typical free areas:

150x150mm	67%
200x200mm	65%
250x250mm	67%
300x300mm	69%
400x400mm	64%
